

SOLUTIONS ALUMINUM

Maximize time on the job with products designed for high performance cutting, grinding, cleaning and finishing on aluminum and other soft metals.

ALUMINUM

Aluminum is durable, offers incredible strength for its weight, and is naturally resistant to corrosion. These attributes make it an attractive option when determining what material to use in metal fabrication.

Aluminum can be a challenging metal to work with because of its low melting temperature and tendency to load on abrasives, making them less effective. Choosing the right abrasive when working with aluminum can eliminate weld defects, maximize productivity and reduce overall consumable spend.

ALUMINUM WELD DEFECTS REDUCE STRUCTURAL INTEGRITY

WELD POROSITY

PROBLEM: Reduced weld strength and lower fatigue resistance.

CAUSE: Hydrogen gas dissolved in the molten weld.

SOURCE: Moisture, grease or other hydro-carbons in weld zone.

SOLUTION: **How to minimize weld porosity.**

Prior to welding, remove all surface contaminants including grease, oil, dirt or paint that can generate hydrogen gas or interfere with weld fusion. Use only high quality, contaminant-free products for surface prep and inter-pass grinding.

OXIDE INCLUSIONS

PROBLEM: Reduced weld strength and lower fatigue resistance.

CAUSE: Aluminum oxide is not destroyed in the welding process.

SOURCE: Natural-occurring aluminum oxide on material prior to welding.

SOLUTION: **How to minimize oxide inclusions.**

Remove the thin, tough, transparent film of aluminum oxide from the metal surface. This process should be done just before starting the weld. Use only high quality, contaminant-free products for surface prep and inter-pass grinding.

SEE THE DIFFERENCE

Aluminum weld without proper weld preparation exhibits porosity, resulting in an unacceptable weld.

Aluminum weld with proper weld preparation shows no pores.

HOW ALUMINUM IS DIFFERENT FROM STEEL

INCLUSIONS: The oxide which occurs naturally on steel is destroyed during the welding process. Aluminum oxide is not destroyed during aluminum welding and must be removed prior to welding.

HEAT EXPANSION: When heated, aluminum expands twice as much as steel. As a result, warping and bending are significant issues.

ELECTRICAL CONDUCTIVITY: Since aluminum conducts electricity better than steel, welding parameters like amperage must be adjusted for different conductance.

RFD'S FOR GRINDING, BLENDING & FINISHING

Tiger Aluminum coated abrasive resin fiber & blending discs are **resistant to loading** so you can get the most demanding aluminum jobs done right and done fast.

Tiger Aluminum is specifically designed for high performance grinding on aluminum and other non-ferrous metals. Top coated, Tiger Aluminum releases a lubricant while grinding, reducing heat buildup. Lower grinding temperatures delay melting and prevent the disc from loading, which results in higher cut rates, long life and a superior finish.

APPLICATIONS: Heavy Stock Removal, Edge Chamfering, Weld Blending, Grinding and Surface Finishing

TIGER ALUMINUM RESIN FIBER DISCS / Aluminum Oxide / Non-Loading on Non-Ferrous Metals

Specifically designed for high performance on ALUMINUM and other non-ferrous metals. A top coating grinds cool and is resistant to loading, which results in higher cut rates, long life and a superior finish.

TIGER ALUMINUM GRINDS COOL, CUTS FAST

Tiger Aluminum releases a lubricant which reduces heat buildup and loading on the disc, allowing grains to sustain a high rate and aggressively remove material.

Metal shavings from Tiger Aluminum disc.

Metal shavings from a conventional disc.

CUTTING & GRINDING WHEELS

NON-LOADING WHEELS: Tiger Aluminum is a new line of cutting, grinding, and combination wheels that deliver a non-loading solution that maximizes cut rates, increasing productivity when working with aluminum.

These wheels leverage a unique blend of abrasive grains and contaminant-free additives that work to prevent loading, resulting in higher cut rates and long wheel life.

Tiger delivers high performance on aluminum:

- **Non-loading** formula keeps the wheel from gumming up, allowing operators to get more work done in less time without compromising durability.
- Silicon carbide and aluminum oxide blend delivers a **consistently high cut rate** throughout the life of the wheel.
- **Extended wheel life** on aluminum reduces changeovers and lowers cost of use.
- **Contaminant-free** wheels deliver a worry-free solution for aluminum applications.

APPLICATIONS: Aluminum Cutting, Grinding, Heavy Stock Removal, Weld Removal, Weld Blending, Beveling and Chamfering

Delivers a

58222

ALUMINUM ALLOYS

An aluminum alloy is a chemical composition where other elements are added to pure aluminum in order to enhance its properties, primarily to increase its strength. These other elements include iron, silicon, copper, magnesium, manganese and zinc at levels that combined may make up as much as 15 percent of the alloy by weight. Alloys are assigned a four-digit number, in which the first digit identifies a general class, or series, characterized by its main alloying elements.

3000 SERIES

Good Corrosion Resistance

Fair Strength

USES: Roofing, Siding, Gutters

5000 SERIES

Good Corrosion Resistance

Good Strength

USES: Marine Applications

6000 SERIES

Good Corrosion Resistance

Excellent Strength

USES: Structural, Pipe

FLAP DISCS FOR GRINDING & FINISHING

Weiler's abrasive flap discs grind and finish in one step, saving you time and money. There's no switching from a Type 27 grinding wheel to a resin fiber disc.

STYLE

CONICAL (Type 29)

15° – 35°

The angled flaps maximize surface contact for aggressive stock removal on flat surfaces.

FLAT (Type 27)

0° – 15°

Smooth grinding, blending and finishing on flat surfaces and slight contours.

HIGH DENSITY (Type 27)

0° – 15°

Conformable to irregular surfaces. Smooth grinding, blending and finishing on flat surfaces.

ANGLED (Type 27 / Hybrid)

0° – 35°

Curved flaps for grinding fillet welds, T-joints, and hard-to-reach areas.

Tiger Aluminum flap discs offer an innovative paired flap design that delivers high performance grinding on aluminum. The top flaps are coated to eliminate loading and allow the disc to maintain a high cut-rate, while the alternating flaps aggressively remove material with self-sharpening zirconia aluminum grains. This unique paired flap design delivers the ultimate combination of high performance grinding for aluminum at an exceptional value.

PAIRED FLAP DESIGN

Delivers High Performance Grinding on Aluminum

SELF SHARPENING

Zirconia Alumina Grains Deliver Aggressive Grinding

COATED FLAPS

Eliminate Loading

Coarse
36 Grit

Ideal for chamfering, beveling, weld removal and stock removal

Fine

TIGER CERAMIC TRIMMABLE FLAP DISCS

Ceramic Alumina / Conical Style (Type 29) / Composite Backing

Weiler's Trimmable Tiger flap discs are designed for hard-to-reach areas such as fillet welds and irregular shapes while grinding on-edge without changing tools. The unique composite backing can be trimmed, exposing more abrasive material and extending disc life, resulting in lower grinding and finishing costs.

NON-WOVEN FOR FINISHING

Weiler's non-woven products help you get the most demanding jobs done right and done fast.

54510

Interleaf flap wheels provide a combination of non-woven and coated abrasive material to produce a very conformable product designed to be a finishing and surface blending tool. They are ideal for producing satin or decorative finishes on irregular or contoured surfaces.

APPLICATIONS: Decorative Finishing, Satin and Antique Finishes, Final Sanding, Soft Metal Finishing, Fine Burr Removal

302 STAINLESS STEEL

Weiler's stainless steel wire brushes are manufactured using wire drawn from Type 302 stainless steel. Although 302 stainless is typically a non-magnetic material, it is important to remember that the amount of cold-working that it experiences during the wire-drawing process causes it to become magnetic. For this reason, proper storage and handling of stainless steel brushes is critical to prevent cross-contamination and

"after rust" issues. Type 302 is widely used in the manufacture of power brushes for its relative durability and aggressive action as well as for its austenitic properties that insure the corrosion resistance of the materials on which it is applied. The use of a different grade of stainless steel wire is typically required in critical weld preparation and cleaning applications, but it will not address "after rust" and other cross-contamination issues.

SMALL DIAMETER WHEELS / 302 Stainless Steel

These wheels provide a flexible brushing action and consistent performance for light-duty cleaning and deburring applications requiring a small wheel. Ideal for wire stripping and thread cleaning.

Diameter	Wire Size	Arbor Hole	Face Width	Trim Length	Max. RPM	Standard Pack	Item Number
