

CONSUMABLE PRODUCTIVITY

Manage Your Consumable Spend by Understanding It.

Industrial consumables can be measured in life cycle, safety, and production. These studies drive quantitative data which can be measured and verified. Data that is measurable can be repeated. Repeatability is the first step to controlling consumable cost.

Weiler's Consumable Productivity Program has been used by numerous companies throughout the industrial / welding community to reduce their consumable spend. A recent program participant generated \$70,000 in annual savings. The study encompasses product viability through product life cycle as well as productivity. This analysis provides hard data as to how product is used, how long it lasts, and how productive it is. The goal is to determine data points which will aid a company in understanding consumable cost weighed against output.
