A REVOLUTION IN FOUNDRY GRINDING

The grinding process in foundries is a tough job. For decades, abrasives technology for off-hand grinding has remained unchanged. It’s time for improvement, faster grinding rates, reduced cycle times and an improved operator experience. It’s time for a revolution.

Weiler’s line of Tiger® type 11 flaring cup grinding wheels deliver the next evolution in technology for portable foundry grinding. From Tiger Ceramic, which provides superior grinding to Tiger SiC for castings with burnt-in sand, our line offers the performance you need to get the job done fast. Tiger Ceramic sets a new standard for performance, delivering up to 30% faster cut-rate compared to competitive zirconia cups. This faster material removal translates to better productivity in the cleaning room and less operator fatigue.

Specifically designed with performance, safety and versatility in mind, Weiler cup rocks are:

- Precision balanced to ensure smooth, vibration-free operation and reduced operator fatigue.
- Unique anchored safety nut locks the cup in place to increase safety and prevent product breakage.
- Zinc plated 5/8”-11 nut prevents oxidation, eliminating contamination and allows for easy spin-on, spin-off changeover.

CUP APPLICATIONS: Ideal for heavy metal removal, grinding, transitioning, rough beveling and removing cracks/flaws.

ANCHORED NUT INCREASES SAFETY
Our testing shows that the Weiler anchored safety nut outperformed the industry standard metal back:

- Up to 3X higher torque holding strength
- Double speed burst testing ratings
